

TELMAH KINYUY TANTOH

Toronto, Ontario, Canada | 226-343-5722 | tantohtelmah@gmail.com | LinkedIn: [Telmah Tantoh](#) | GitHub: tantohtelmah

PROFESSIONAL SUMMARY

Computer Science graduate from the University of Guelph with hands-on experience in software engineering, backend API development, cloud deployment, and automation. Experienced building scalable applications using Python, Java, SQL, React, and AWS. Strong foundation in software design, RESTful services, debugging, and system optimization through internships, academic projects, and production deployments. Seeking early-career software engineering opportunities to build reliable, scalable enterprise applications.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, SQL, C, HTML/CSS

Frameworks & Development Tools: React, Angular, Ionic, Node.js, REST APIs, Git/GitHub, Jira, VS Code

Cloud & DevOps: Amazon Web Services (S3, EC2, Elastic Beanstalk, CloudFront, Route 53), CI/CD, Linux, Docker

Data & Databases: PostgreSQL, Relational Database Design, pandas, matplotlib, snowflake

Testing & Automation: Test Case Design, API Testing, Regression Testing, Functional Testing, Integration Testing, Debugging, Automation Scripting, CI/CD Testing Concepts

Systems & IT Support: Windows, Linux/WSL, Microsoft 365, Networking Fundamentals (TCP/IP, DNS, DHCP, OSI Model), ServiceNow

GIS & Specialized Tools: QGIS, OpenStreetMap Data, Spatial Data Analysis

AI & Automation: OpenAI API, AI agent development, Prompt engineering, RAG workflows, Antigravity, Gemini

PROFESSIONAL EXPERIENCE

Data and Automation Intern

First Capital REIT — Toronto, ON

May 2026 – Present

- Develop automation workflows and scripts to reduce manual business processes and improve system efficiency.
- Build automated logic and workflow orchestration for internal business operations and decision support.
- Analyse and transform structured datasets using Python and SQL to improve data quality and reporting accuracy.
- Debug workflow failures and troubleshoot system issues affecting automation reliability.
- Collaborate with technical teams to design scalable automation solutions using Microsoft Azure Logic Apps.
- Document technical architecture, workflow logic, and support procedures for maintainability.
- Collaborate to build logic apps with Microsoft Azure

Primary Reserve Member

Canadian Armed Forces Primary Reserve

January 2025 – Present

- Demonstrate leadership, discipline, teamwork, and reliability in operational environments.
- Develop crisis response and accountability skills transferable to technical roles.

Frontend Developer

TradeBinder — Remote

December 2025 – Present

- Developed frontend components using Angular, Ionic, and TypeScript.
- Integrated REST APIs and maintained reliable data flow between frontend and backend systems.
- Diagnosed and resolved application issues through debugging and testing.
- Collaborated using Git in a multi-developer development environment.

Customer Service Representative (Technical Support)

Reliance Home Comfort — Cambridge, ON

August 2023 – September 2024

- Delivered technical and account support in a high-volume customer environment.
- Diagnosed system issues and documented resolutions for operational continuity.
- Maintained 95%+ customer satisfaction through clear communication and rapid troubleshooting.

IT Network & Data Management Intern

UNITA Contractors — Bamenda, Cameroon

January 2023 – May 2023

- Assisted with network setup, system troubleshooting, and data organization.
- Supported infrastructure reliability through documentation and monitoring.

TECHNICAL PROJECTS

CareerMap – Cloud-Hosted Career Management Platform

Python, React, PostgreSQL, AWS

- Designed and built a full-stack cloud-hosted application supporting job tracking and AI-driven career recommendations.
- Developed secure RESTful APIs for authentication, recommendation delivery, and roadmap generation.
- Designed relational database schemas and optimized backend data access using PostgreSQL and SQLAlchemy.
- Deployed production infrastructure on AWS using S3, Elastic Beanstalk, CloudFront, and Route 53.
- Debugged deployment issues, API failures, and infrastructure misconfigurations to improve system reliability.
- Implemented AI-powered recommendation workflows using OpenAI APIs.

GIS / Spatial Analysis Research Project (Thesis)

QGIS, Python, Geospatial Data Analysis

- Conducting research on building–street spatial association and pseudo-address generation.
- Analysing aerial imagery, OpenStreetMap data, and geospatial datasets.
- Developing spatial reasoning methods beyond distance-based approaches.

Customer Support Agent – Agentic AI Workflow System

Python, ADK 2.0, Antigravity CLI, Kaggle

- Built a graph workflow customer-support agent for a shipping company using ADK 2.0 and Antigravity CLI.
- Implemented intelligent routing logic to classify customer requests into shipping-related and unrelated categories.
- Developed workflow nodes for shipping FAQ handling and automated response management.
- Applied agentic AI concepts including workflow orchestration, task routing, and conversational decision-making.
- Link to badge: <https://developers.google.com/profile/badges/events/cloud/five-day-ai-agents?u=109466860428891242240>

EDUCATION

University of Guelph

Bachelor of Science in Computer Science

September 2024 - June 2026

GPA: 3.3/4.0

Relevant Coursework: Operating Systems, Software Design, Databases, Computer Networks, Data Structures and Algorithms, Cryptography, Computer Organization

ALX Academy

Software Engineering Program

August 2023 – November 2024

University of Bamenda

Bachelor in Computer Engineering

October 2020 – January 2023

GPA: 3.6/4.0

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Microsoft Fundamentals Training
- SoloLearn SQL Course Certificate
- Google Generative AI
- AWS developer – Associate certificate (in-progress)
- CompTIA A+ Certification (Planned 2026)
